

Flujos de trabajo con Git:
usa Git de una forma eficiente

jesus@jesusamieiro.com

Flujo de trabajo

- Convenciones (Pautas de trabajo)
- Buenas prácticas

Ventajas

- Consistencia en el trabajo del equipo
- Mayor
 - productividad
 - calidad en el código → Code reviews
 - n.º de ciclos de publicación
- Mantenibilidad → ↑ organización del trabajo
- Onboarding más sencillo
- Integración con CI/CD

¿Qué buscamos?

- ¿Escala? → Tamaño del equipo
- ¿Es sencillo de aprender su uso?
- ¿Impone mucha carga extra?
- ¿Vamos a ser más ágiles?
- ¿Permite realizar code reviews?
- ¿Permite integrarse con sistemas CI/CD?

Tipos de flujo de trabajo

- Centralizado
- Ramas de funcionalidades
- Gitflow
- Forks

Centralizado

Características y operativa

- Funcionamiento «similar» a SVN u otros SCM centralizados
- 1 servidor principal
- Uso solo de 1 rama
- Commit local y push

Repositorio

Centralizado

```
cd /var/tmp
```

```
mkdir -p /var/tmp/server
```

```
mkdir -p /var/tmp/user1
```

```
mkdir -p /var/tmp/user2
```

```
git init --bare /var/tmp/server/repo1.git
```

Centralizado (II)

```
# Usuario 1  
cd /var/tmp/user1/  
git clone /var/tmp/server/repo1.git  
cd repo1  
git config user.name "Noa"  
git config user.email noa@example.com  
echo "Línea 1 archivo 1" > archivo1.txt  
git status
```

Centralizado (III)

```
# Usuario 1
```

```
git add .
```

```
git commit -m "Añado la línea 1 al archivo1.txt"
```

```
echo "Línea 2 archivo 1" >> archivo1.txt
```

```
git add .
```

```
git commit -m "Añado la línea 2 al archivo1.txt"
```

Centralizado (IV)

```
# Usuario 1
```

```
git push origin main
```

Centralizado (V)

```
# Usuario 1
```

```
echo "Línea 3 archivo 1" >> archivo1.txt
```

```
git add .
```

```
git commit -m "Añado la línea 3 al archivo1.txt"
```

Centralizado (VI)

```
# Usuario 2
```

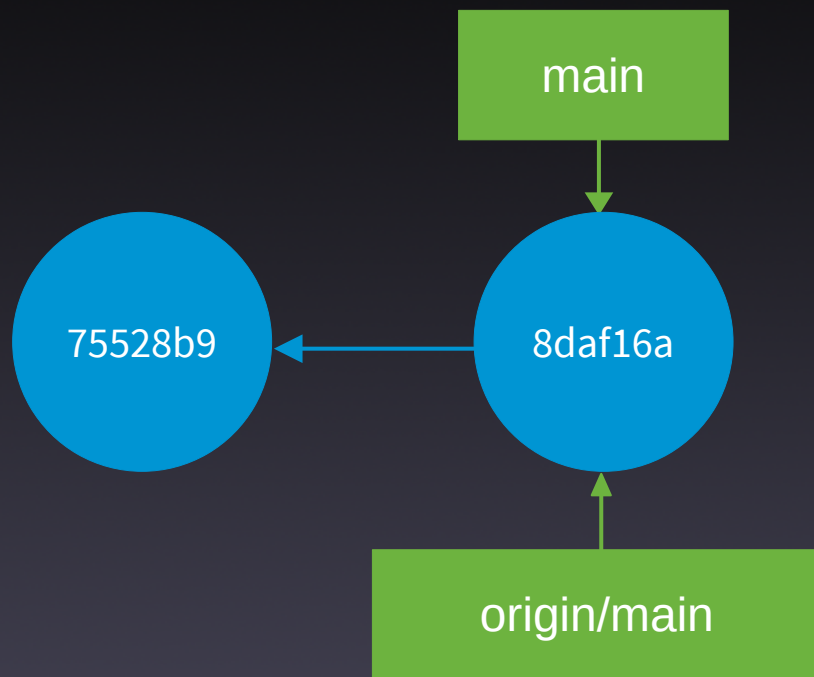

```
cd /var/tmp/user2/
```

```
git clone /var/tmp/server/repo1.git
```

```
cd repo1
```

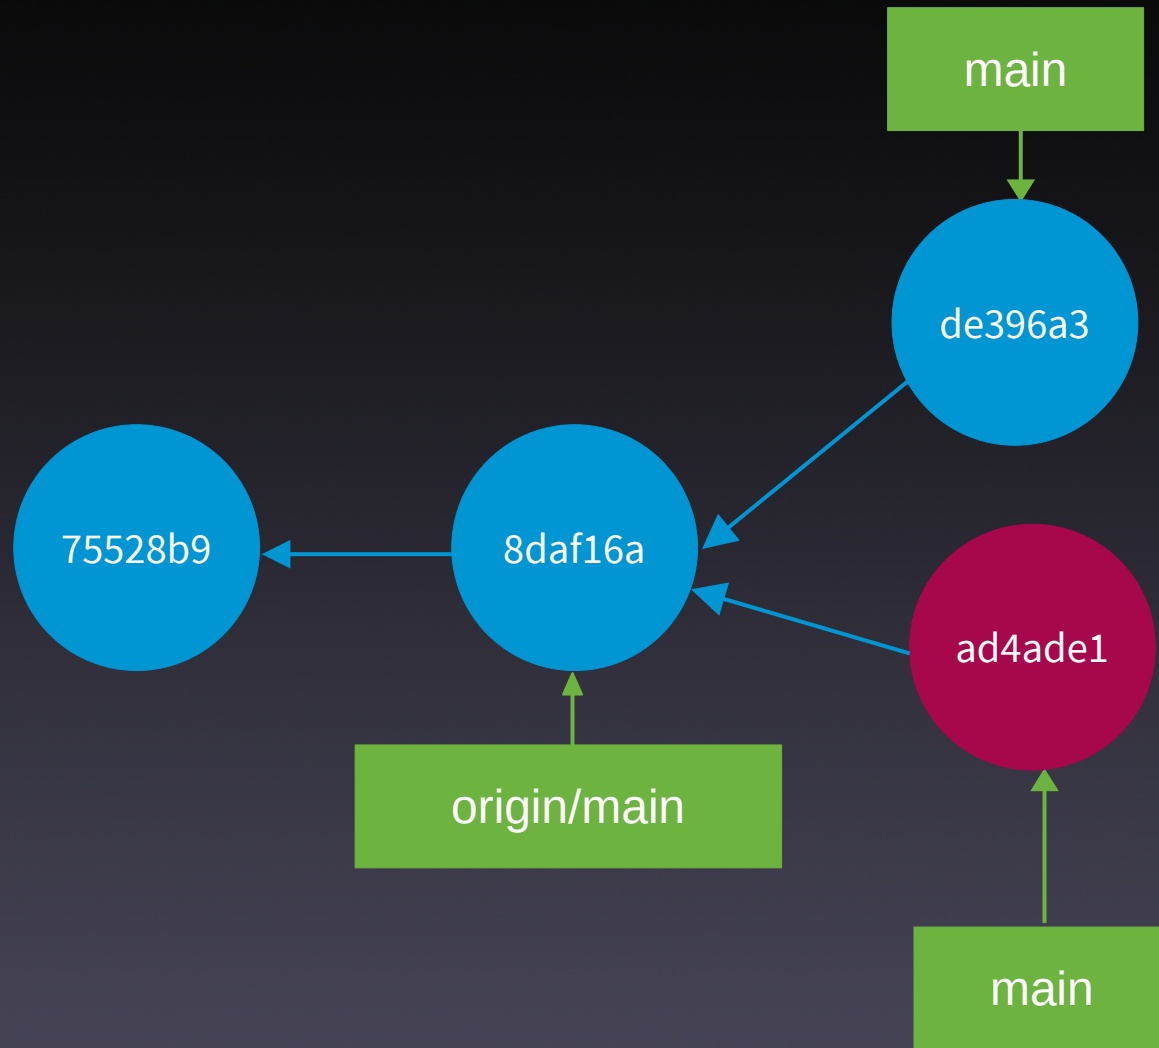

```
git config user.name "Ada"
```

```
git config user.email ada@example.com
```

Centralizado (VII)

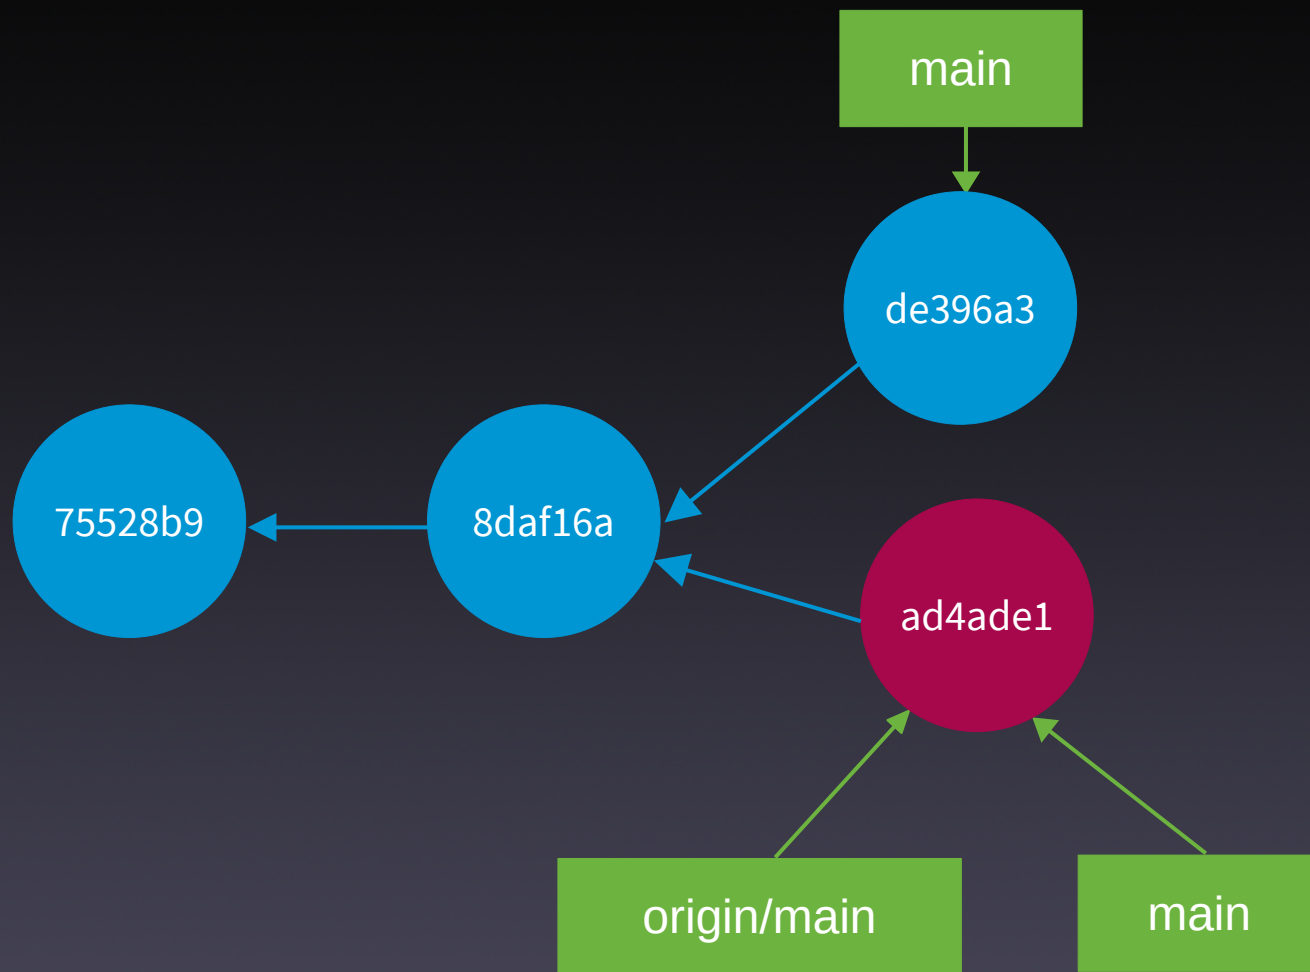

```
# Usuario 2  
echo "Línea 1 archivo 2" > archivo2.txt  
git status  
git add .  
git commit -m "Añado la línea 1 al archivo2.txt"
```

Centralizado (VIII)

```
# Usuario 2
```

```
git push origin main
```

Centralizado (IX)

```
# Usuario 1
```

```
cd /var/tmp/user1/repo1/
```

```
git push origin main
```

```
To /var/tmp/server/repo1.git
```

```
! [rejected]          main -> main (fetch first)
```

```
error: failed to push some refs to '/var/tmp/server/repo1.git'
```

```
hint: Updates were rejected because the remote contains work that you do  
hint: not have locally. This is usually caused by another repository pushing  
hint: to the same ref. You may want to first integrate the remote changes  
hint: (e.g., 'git pull ...') before pushing again.  
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
```

Centralizado (X)

```
# Usuario 1
```

```
git pull origin main
```

From /var/tmp/server/repo1

* branch main -> FETCH_HEAD

hint: You have divergent branches and need to specify how to reconcile them.

hint: You can do so by running one of the following commands sometime before

hint: your next pull:

hint:

hint: git config pull.rebase false # merge

hint: git config pull.rebase true # rebase

hint: git config pull.ff only # fast-forward only

hint:

hint: You can replace "git config" with "git config --global" to set a default

hint: preference for all repositories. You can also pass --rebase, --no-rebase,

hint: or --ff-only on the command line to override the configured default per

hint: invocation.

fatal: Need to specify how to reconcile divergent branches.

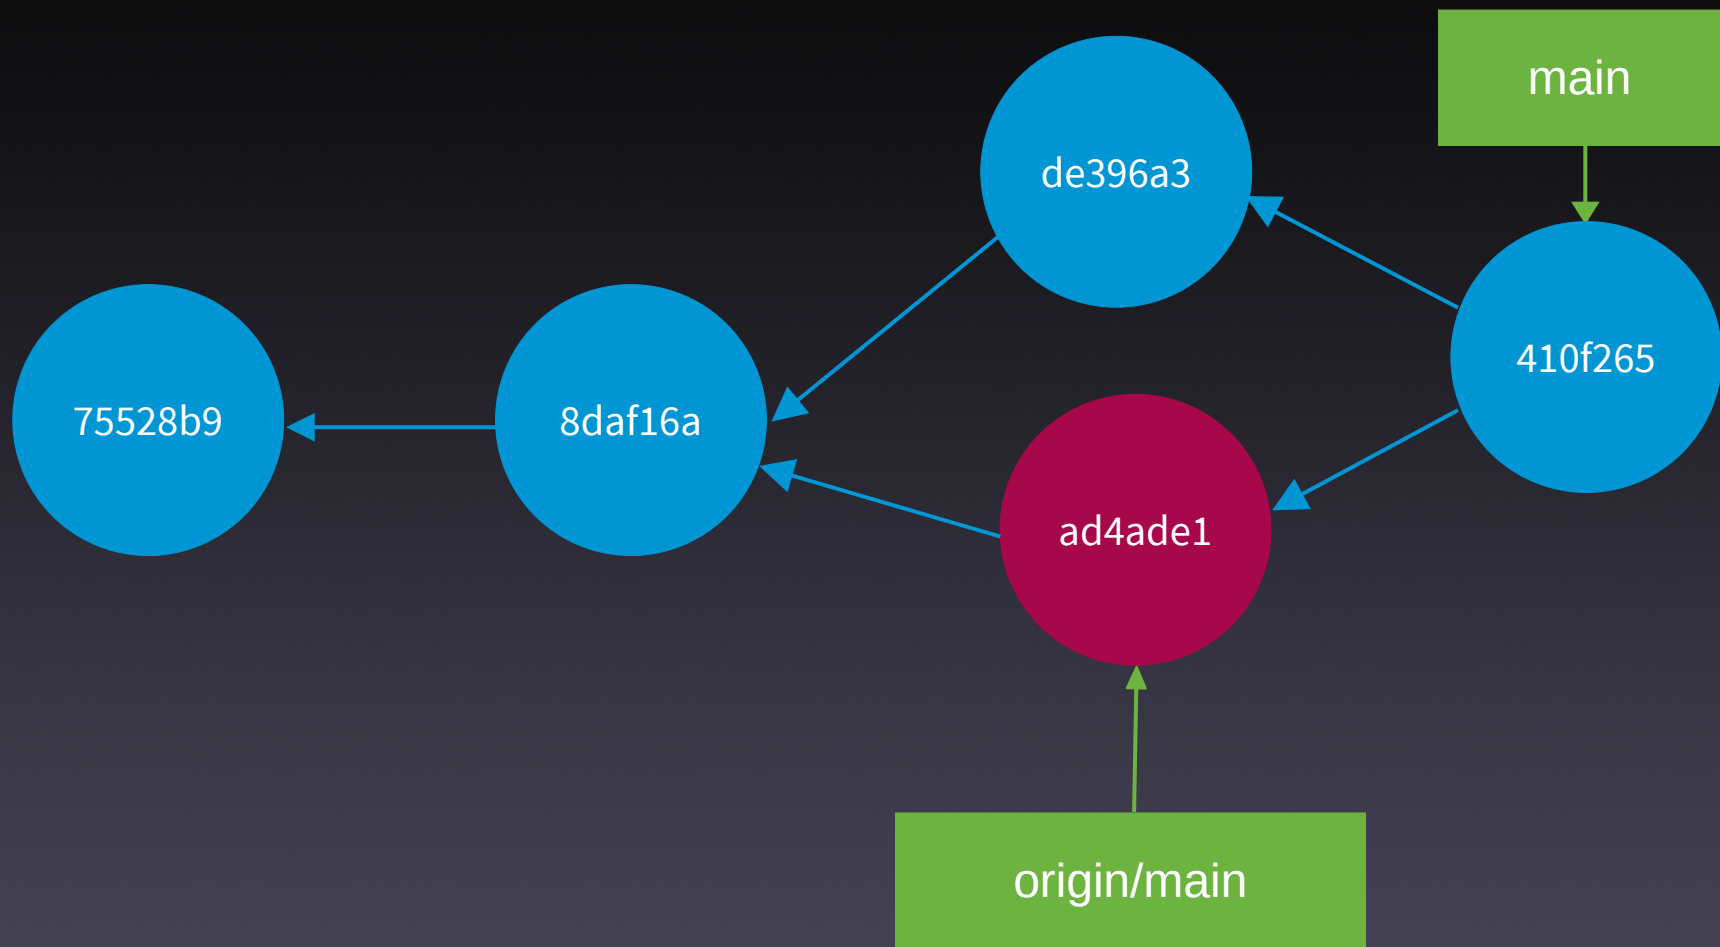

Centralizado (XI)

```
# Usuario 1
```

```
git config pull.ff only
```

```
git pull origin main # Error
```

```
git pull --no-ff # Commit de fusión
```

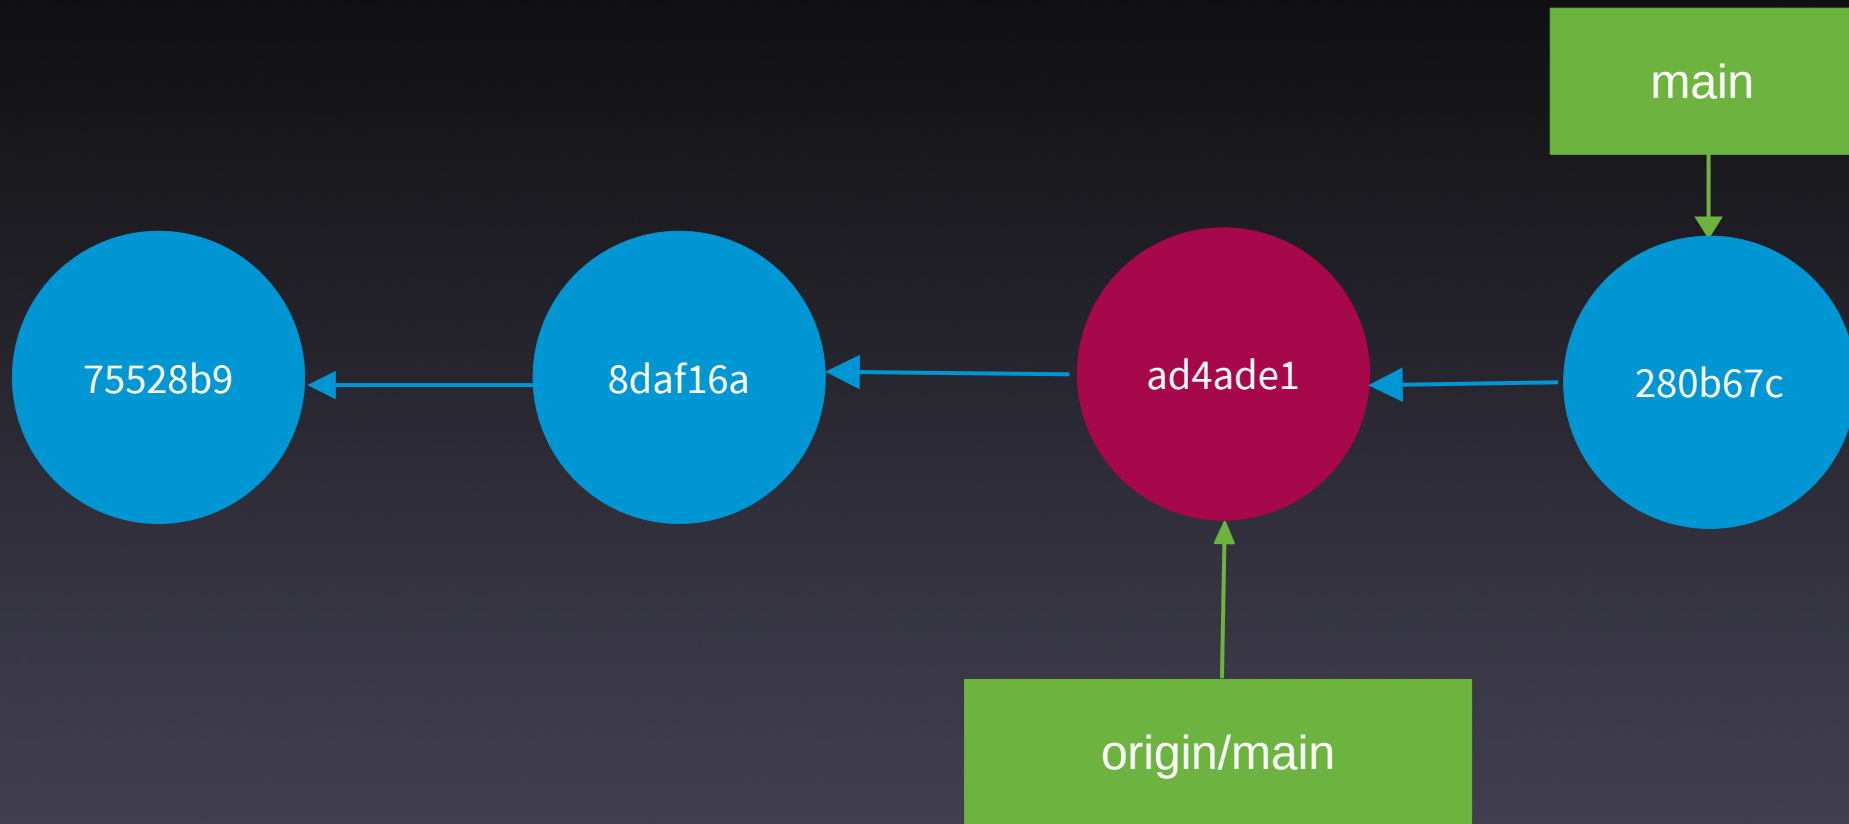

Centralizado (XII)

```
# Usuario 1
```

```
git reset --hard HEAD^1
```

```
git pull --rebase
```

Ventajas

- Simple
- Adecuado para:
 - proyectos individuales o de equipos pequeños
 - Migraciones desde SVN u otros SCM centralizados

Inconvenientes

- Code reviews/PR complicadas
- Conflictos al colaborar
- No es el más adecuado para equipos medianos o grandes *

Ramas de funcionalidad

Feature branch

Características

- 1 servidor central para colaborar
- Todos los desarrolladores tienen acceso a ese servidor
- 1 rama para cada funcionalidad, incluyendo resolución de bugs
- Uso de PR y code review
- Integración en sistemas CI/CD

Feature branch

```
git init --bare /var/tmp/server/repo2.git
```

Feature branch (II)

```
# Usuario 1  
cd /var/tmp/user1/  
git clone /var/tmp/server/repo2.git  
cd repo2  
git config user.name "Noa"  
git config user.email noa@example.com  
touch archiv01.txt  
git add .  
git commit -m "Commit inicial"
```

main

```
graph TD; main[main] --> 75528b9((75528b9));
```

A diagram illustrating a function call. A green rectangular box at the top is labeled 'main'. A green arrow points downwards from the bottom center of this box to a blue circular node below it. The blue circle is labeled with the hexadecimal address '75528b9'.

75528b9

Feature branch (III)

```
# Usuario 1
```

```
git push
```

```
git checkout -b menu-movil
```

```
touch index.html
```

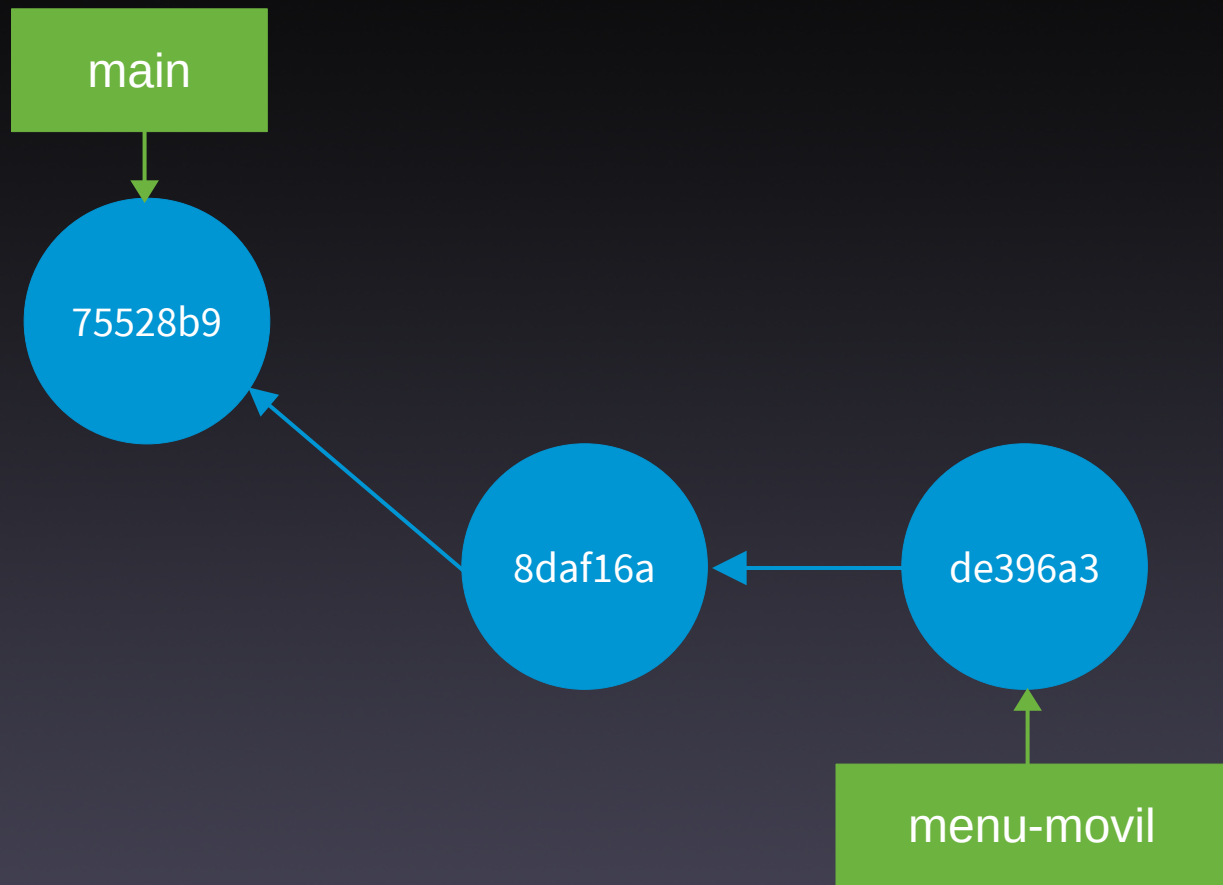

```
git add .
```

```
git commit -m "Añado el archivo index.html"
```

```
touch style.css
```

```
git add .
```

```
git commit -m "Añado el archivo style.css"
```

Feature branch (IV)

```
# Usuario 1
```

```
git push --set-upstream origin menu-movil
```

Experiment: Add OpenAI (ChatGPT) and DeepL support in the Translation Memory #134

What?

We are testing ChatGPT and DeepL as helpers to improve the translator's work.

Feature branch (V)

```
# Usuario 2
```

```
cd /var/tmp/user2
```

```
git clone /var/tmp/server/repo2.git
```

```
cd repo2
```

```
git switch menu-movil
```

akirk commented last month

Member ...

I've played around with it and it works great. Could we keep some stats? Maybe we can just store them in user meta? Specifically I think these will be interesting:

- Number of queries (= one per get-other-language-suggestions endpoint invocation)
- Number of tokens/characters used. [OpenAI reports](#) `['usage'] ['total_tokens']` in its response, for [DeepL we need to count the English UTF8 codepoints](#) (so `mb_strlen()`).
- Number of times the provider was used unmodified.
- Number of times the provider was used modified.

So we'd add stats to the endpoint and for saving the latter we'd need to extend GlotPress a little. Save in JS that a button was clicked and with what text and then when submitting the translation compare the text to the actual submission so that we can categorize it in the buckets.

Very nice! It almost works! The actually used translation is not reported for me, hence all my translations were recorded as "modified". Also a small number of inconsistencies. But otherwise, really great, also that their stats are transparently exposed to the user!

Feature branch (VI)

```
# Usuario 1  
cd /var/tmp/user1/repo2  
touch menu-movil.js  
git add .  
git commit -m "Añado el archivo menu-movil.js"  
git push
```

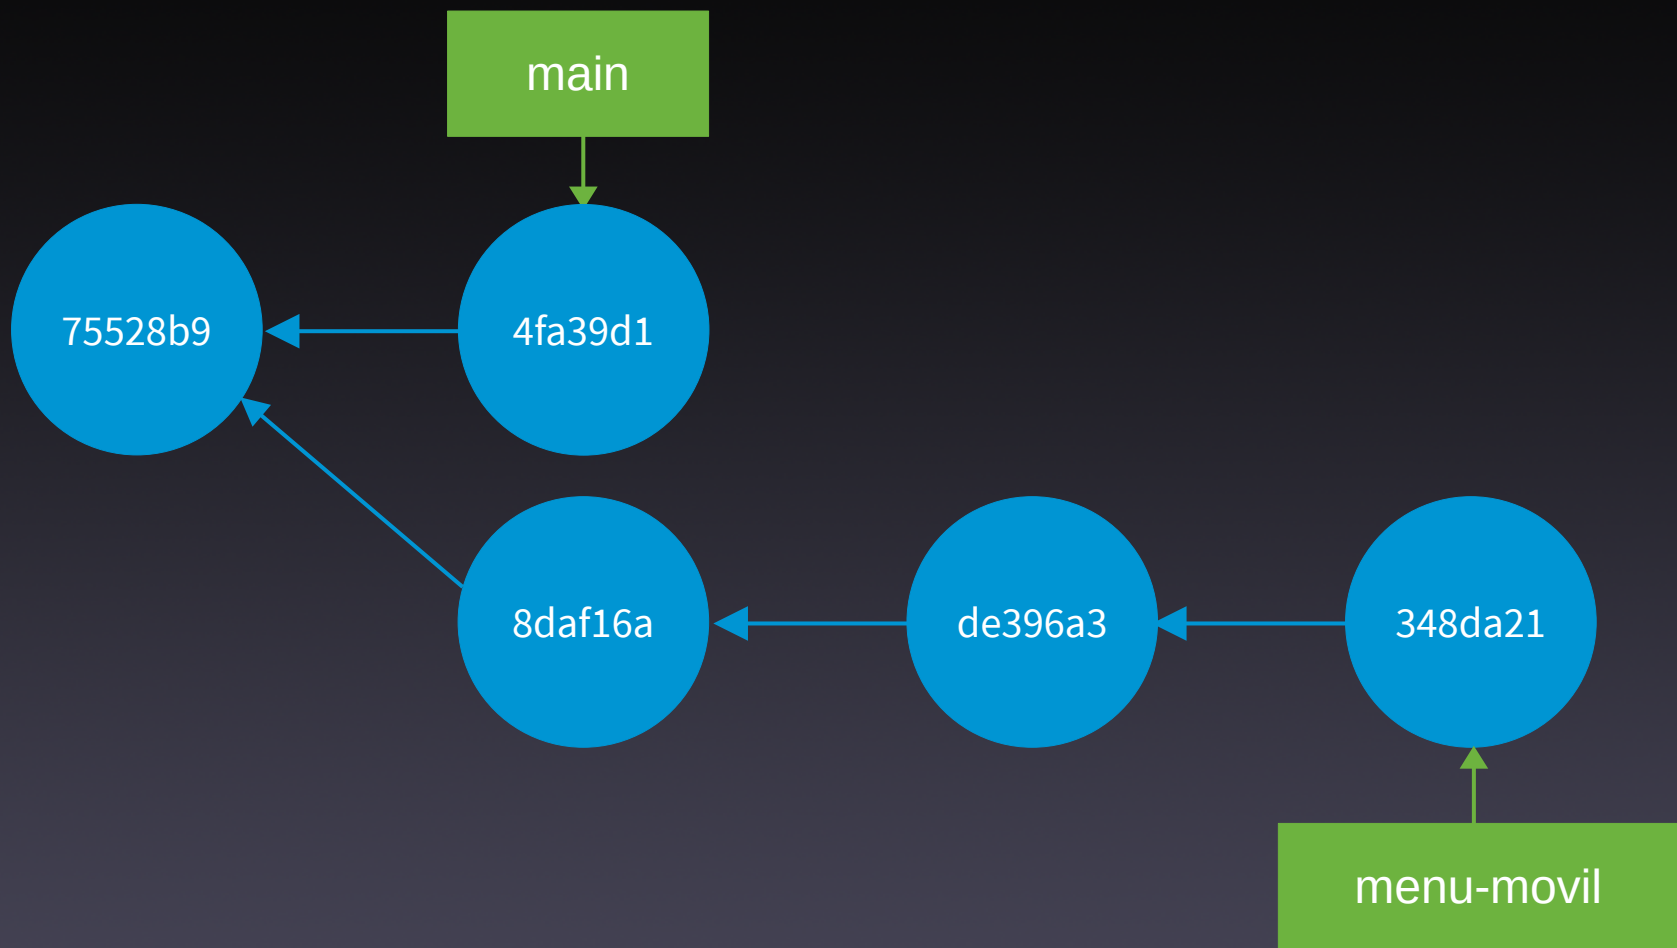

Feature branch (VII)

```
# Usuario 1
```

```
git switch main
```

```
echo "Línea 1 en el archivo1.txt" > archivo1.txt
```

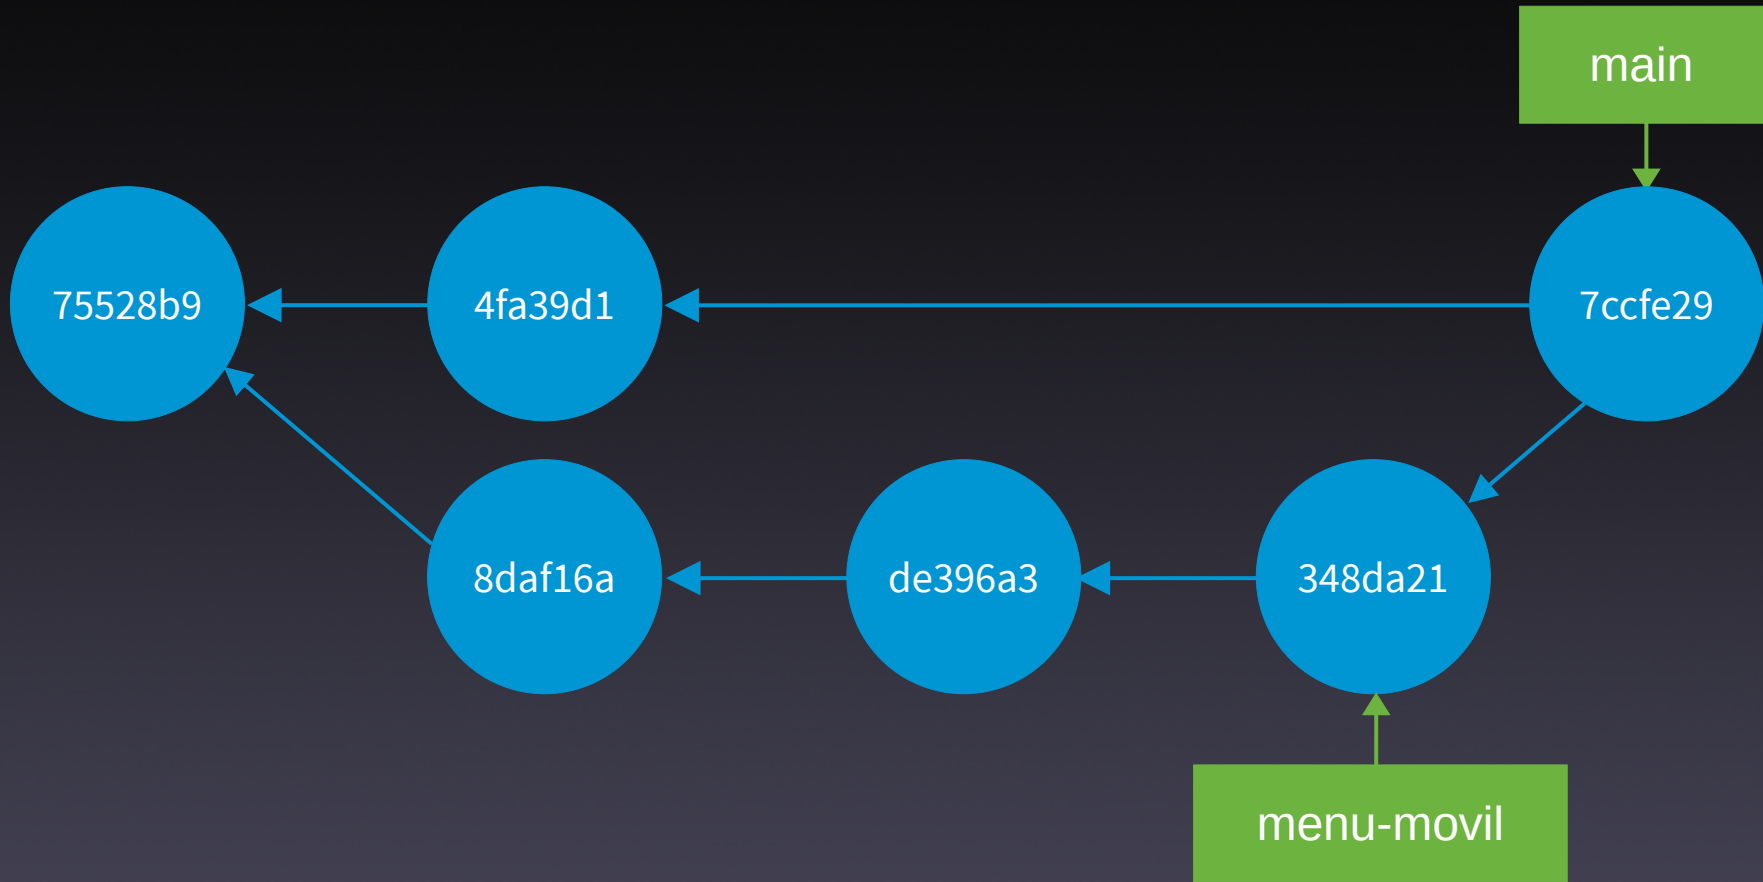

```
git commit -am "Línea 1 en el archivo1.txt"
```

Feature branch (VIII)

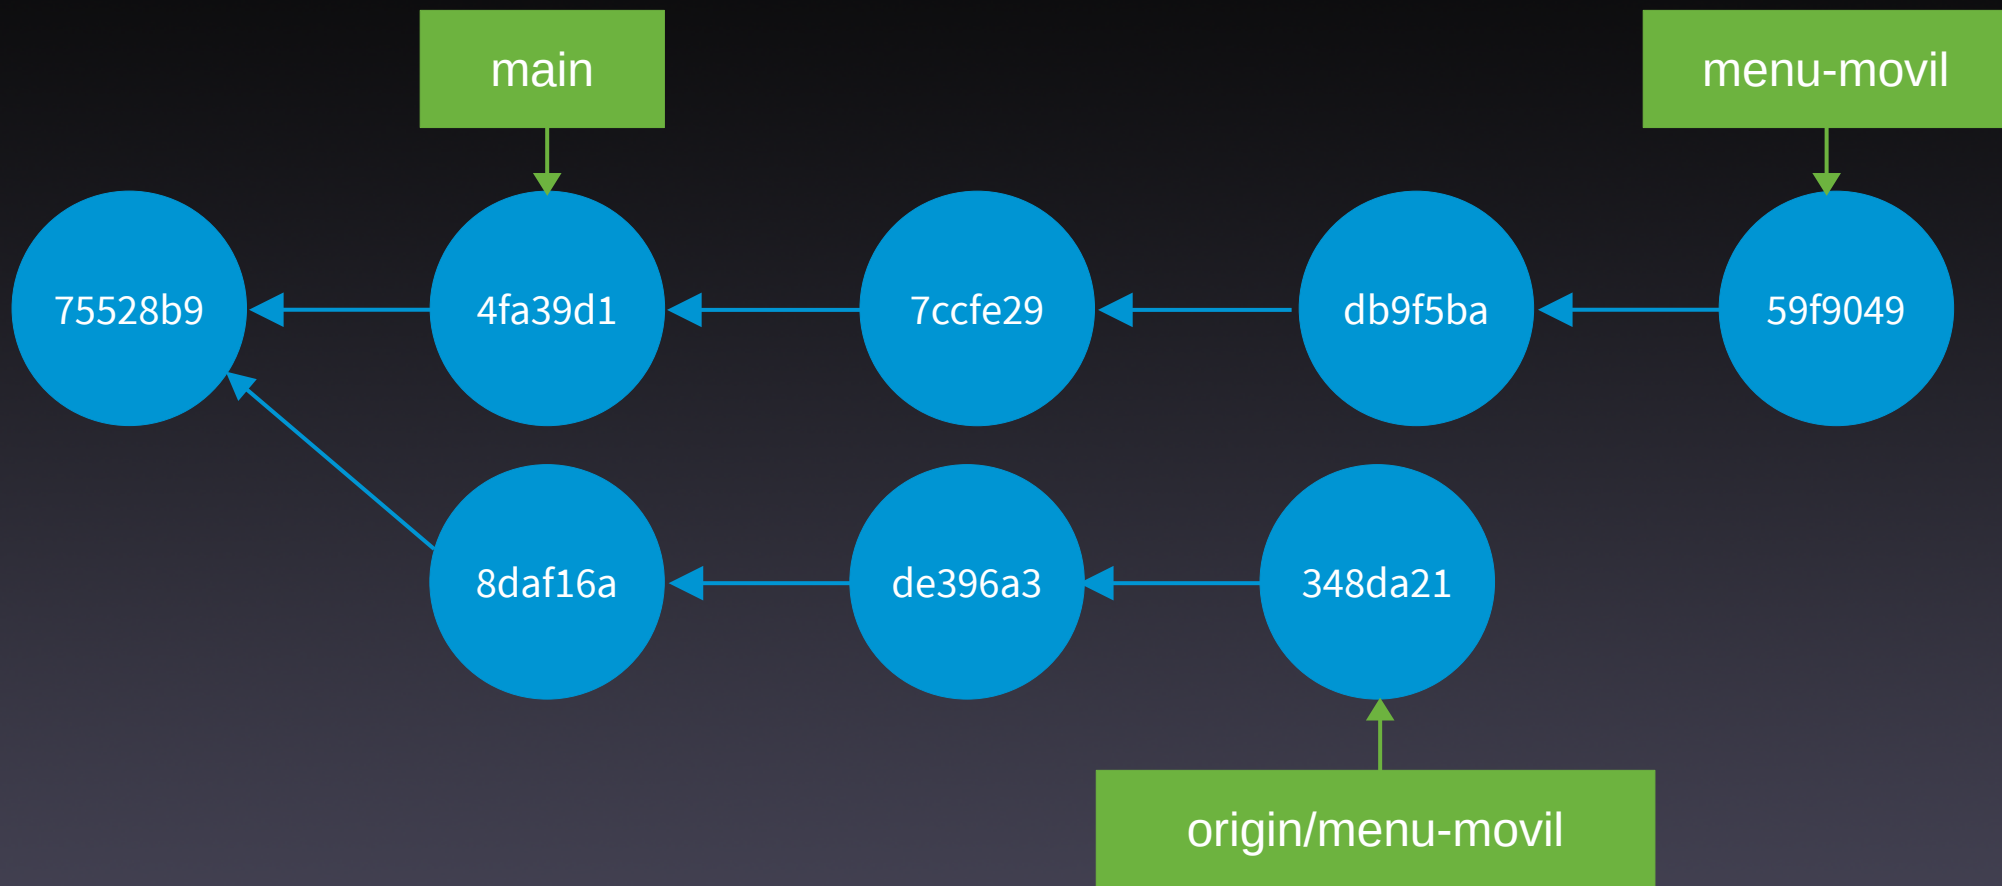

```
# Usuario 1
```

```
git merge menu-movil
```

Feature branch (IX)

```
# Usuario 1  
git reset --hard HEAD^1  
gsw menu-movil  
git rebase main
```

Feature branch (X)

```
# Usuario 1
```

```
# Parto de la situación previa al rebase anterior
```

```
git rebase -i main
```

```
pick ece162c Añado el archivo index.html
pick f0e335b Añado el archivo style.css
pick 93435e5 Añado el archivo menu-movil.js
```

```
# Rebase f45c302..93435e5 onto f45c302 (3 commands)
```

```
#
```

```
# Commands:
```

```
# p, pick <commit> = use commit
```

```
# r, reword <commit> = use commit, but edit the commit message
```

```
# e, edit <commit> = use commit, but stop for amending
```

```
# s, squash <commit> = use commit, but meld into previous commit
```

```
# f, fixup [-C | -c] <commit> = like "squash" but keep only the previous
#           commit's log message, unless -C is used, in which case
#           keep only this commit's message; -c is same as -C but
#           opens the editor
```

```
# x, exec <command> = run command (the rest of the line) using shell
```

```
# b, break = stop here (continue rebase later with 'git rebase --continue')
```

```
# d, drop <commit> = remove commit
```

```
# l, label <label> = label current HEAD with a name
```

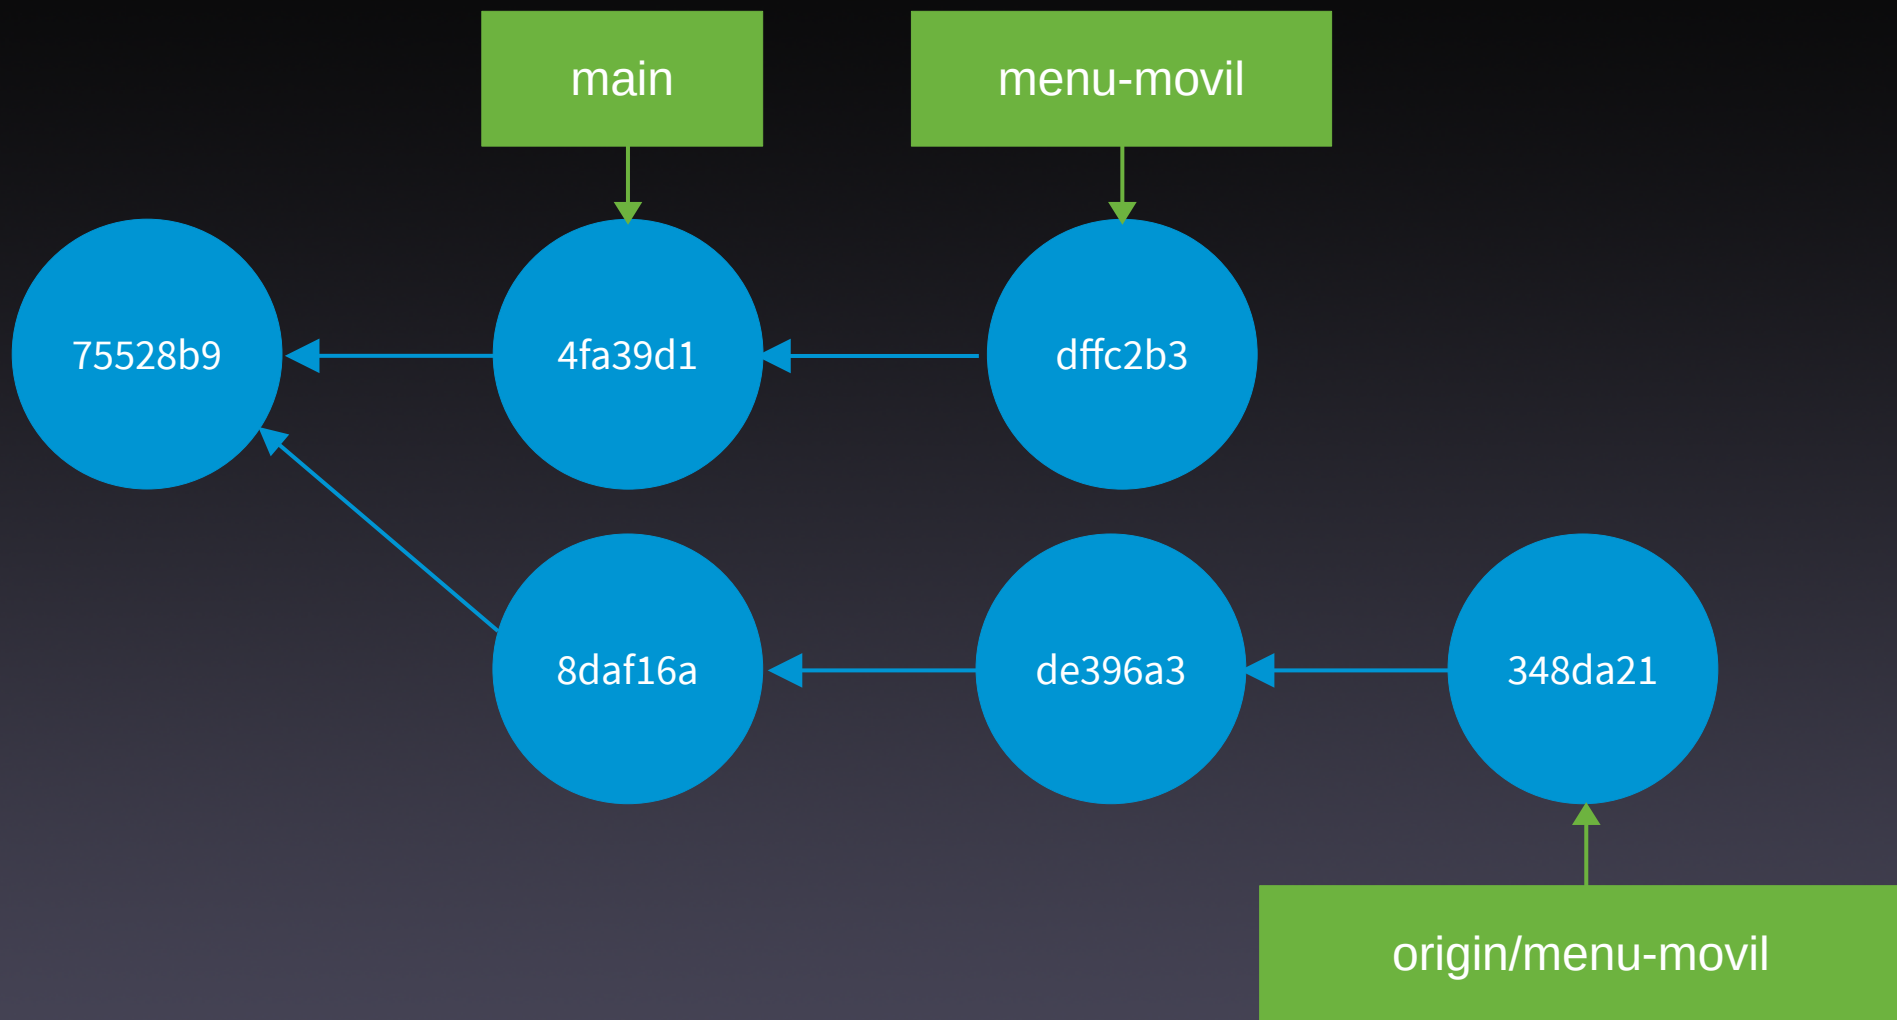

```
# t, reset <label> = reset HEAD to a label
```

```
# m, merge [-C <commit> | -c <commit>] <label> [# <oneline>]
```

```
#           create a merge commit using the original merge commit's
#           message (or the oneline, if no original merge commit was
#           specified); use -c <commit> to reword the commit message
```

```
# u, update-ref <ref> = track a placeholder for the <ref> to be updated
#           to this position in the new commits. The <ref> is
```

```
reword ece162c Añado el archivo index.html  
fixup f0e335b Añado el archivo style.css  
fixup 93435e5 Añado el archivo menu-movil.js
```

Feature branch (XI)

```
# Usuario 1
```

```
git switch main
```

```
git merge menu-movil
```

```
git branch -D menu-movil
```

```
git push origin --delete menu-movil
```

```
# Usuario 2
```

```
cd /var/tmp/user2/repo2
```

```
git switch main && git branch -D menu-movil
```

```
git remote prune origin
```

Ventajas

- Aislamiento con otras funcionalidades
→ colaboración simultánea
- Facilita:
 - las revisiones de código (PR)
 - integración en CI/CD
 - la experimentación sin interferencias
- Base para otros flujos de trabajo

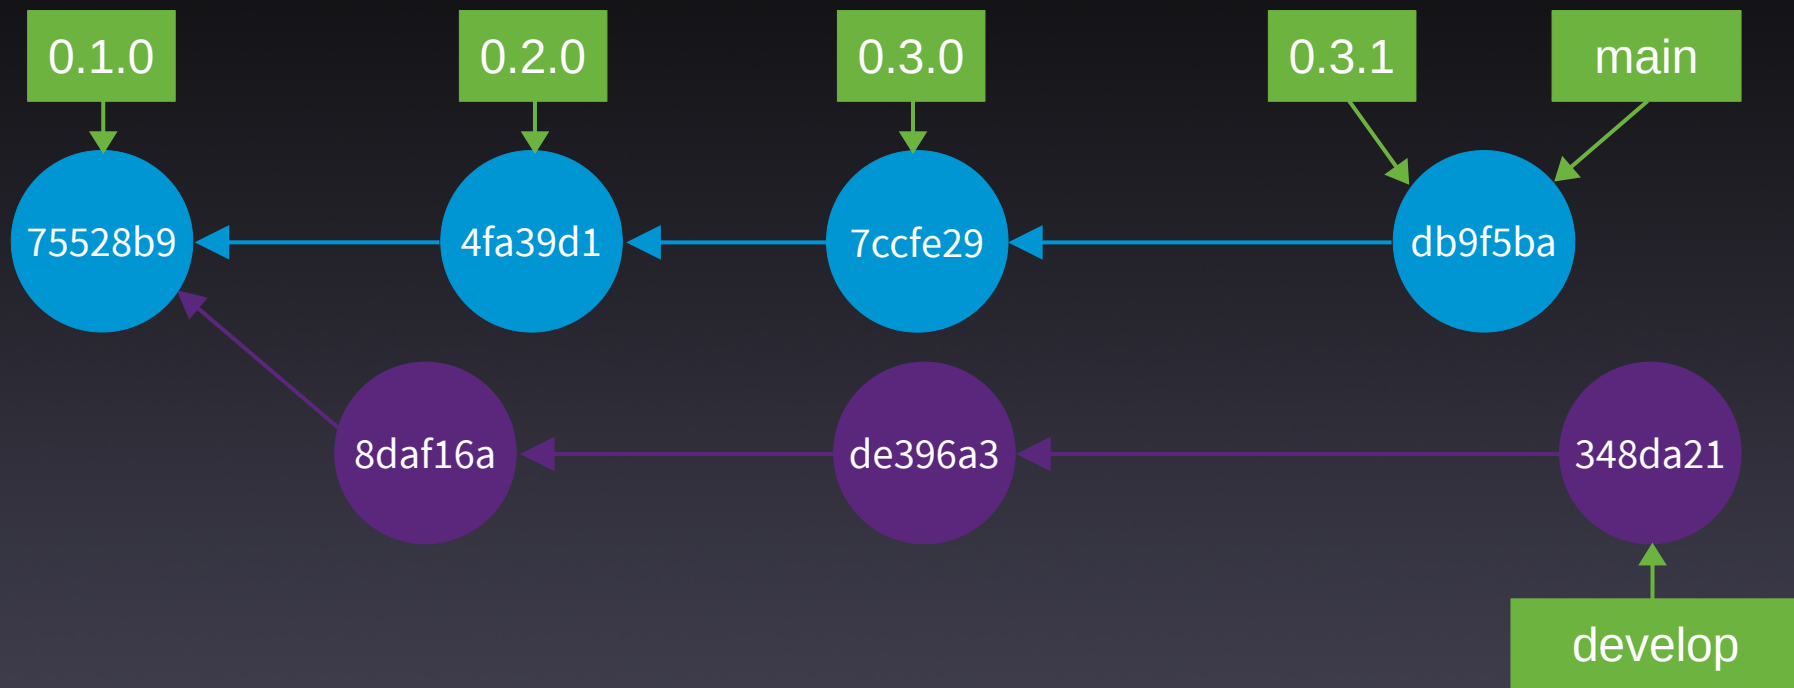

Inconvenientes

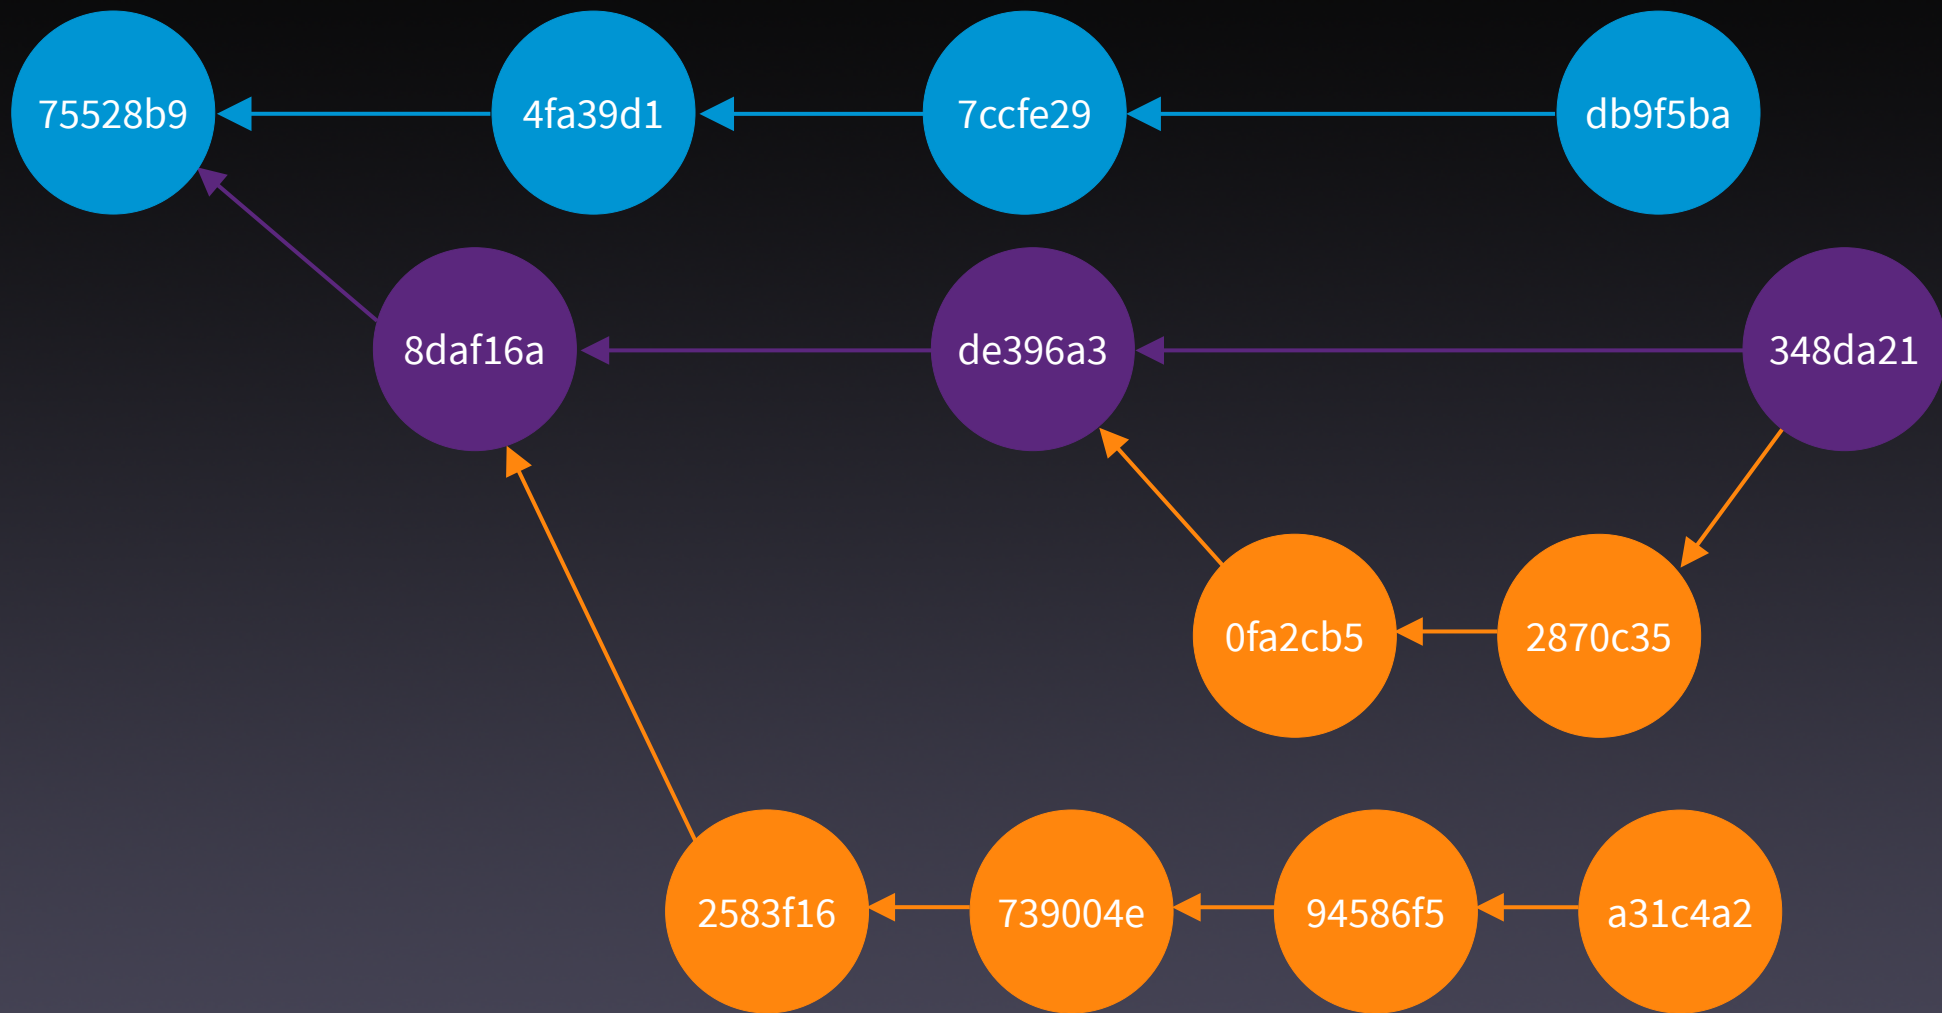

- Incrementa la complejidad
- Problemas de fusión si varias personas trabajan en lo mismo
- Problemas de integración si la funcionalidad se alarga
- Tiempo de mantenimiento

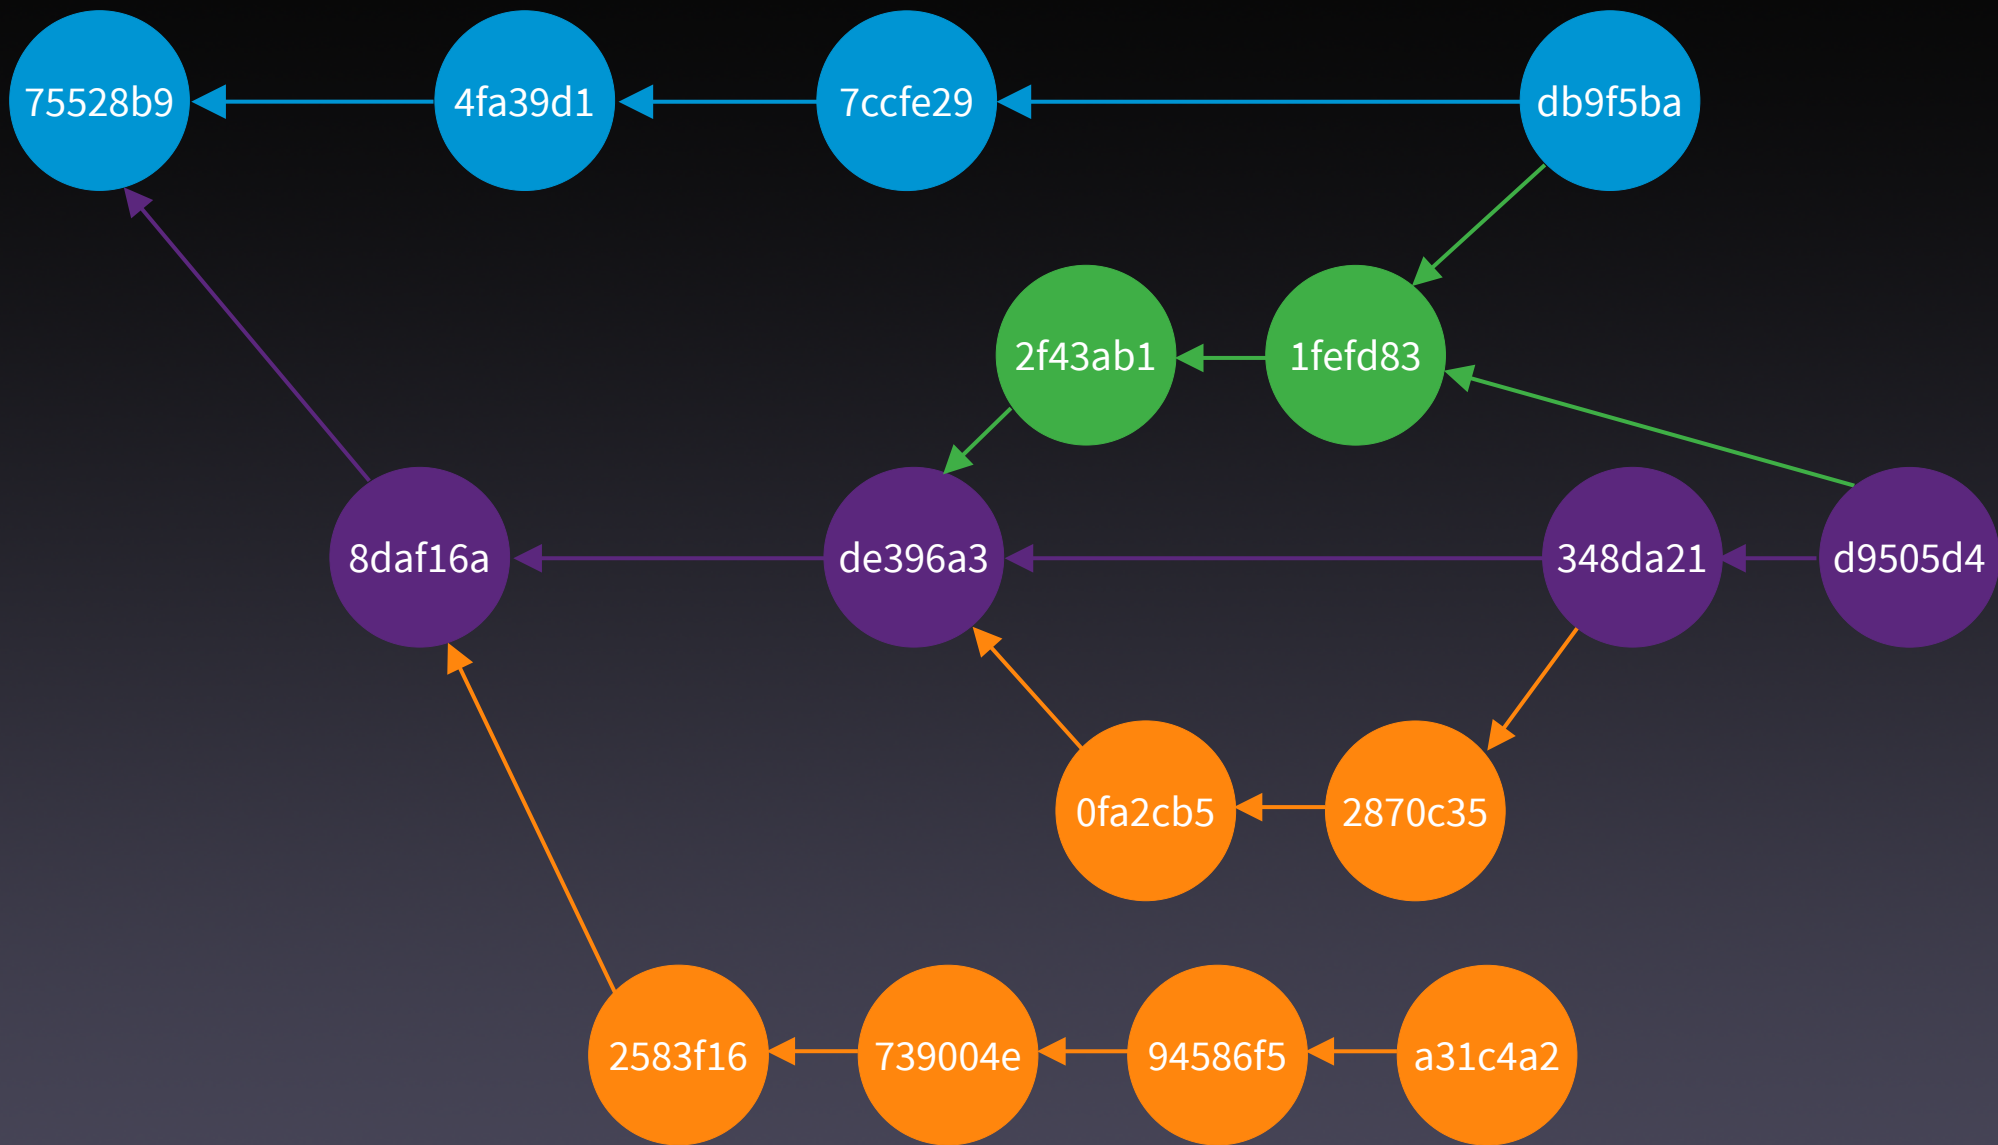

Git flow

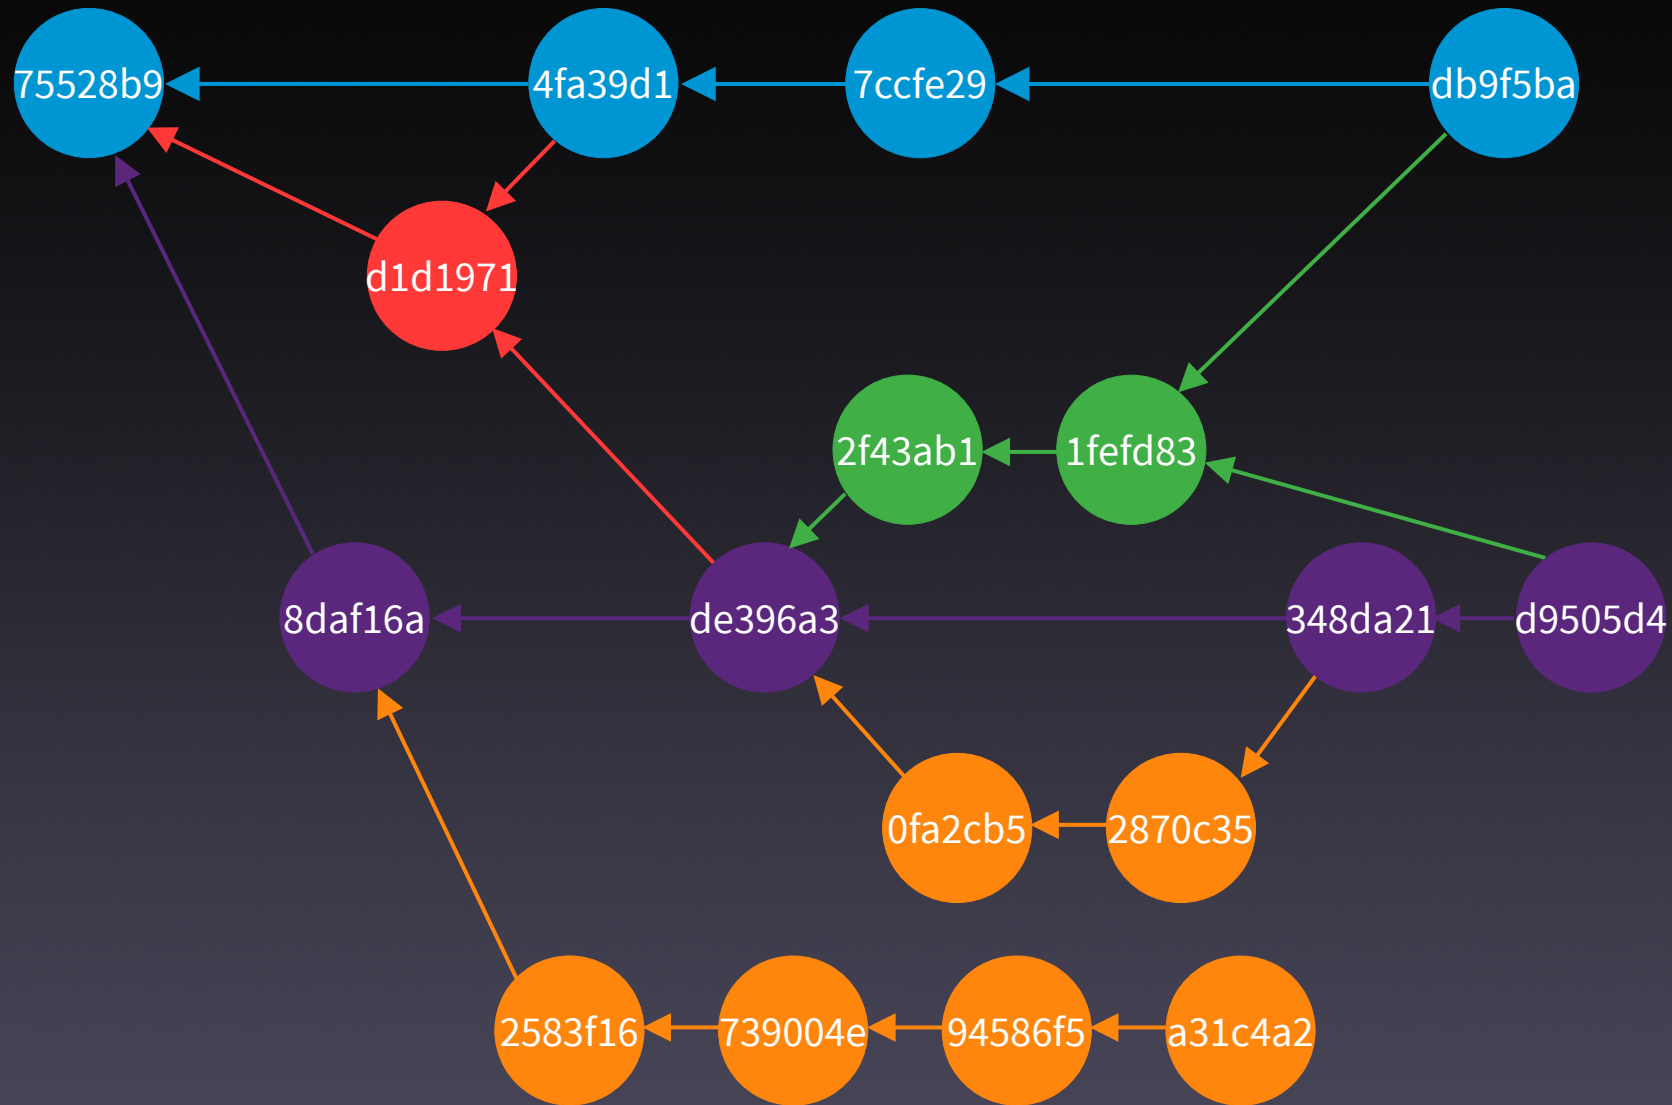

Características

- Roles para las diferentes ramas:
 - Persistentes:
 - main
 - develop
 - Tópicas:
 - feature
 - release
 - hotfix

Git flow

```
# Usuario 1
```

```
git init --bare /var/tmp/server/repo3.git
```

```
brew install git-flow-avh
```

```
cd /var/tmp/user1
```

```
mkdir repo3
```

```
cd repo3
```

```
git flow init
```

```
Initialized empty Git repository in /private/var/tmp/user1/repo3/.git/  
No branches exist yet. Base branches must be created now.  
Branch name for production releases: [master] main  
Branch name for "next release" development: [develop]  
  
How to name your supporting branch prefixes?  
Feature branches? [feature/]  
Bugfix branches? [bugfix/]  
Release branches? [release/]  
Hotfix branches? [hotfix/]  
Support branches? [support/]  
Version tag prefix? []  
Hooks and filters directory? [/var/tmp/user1/repo3/.git/hooks]
```

Git flow (II)

```
# Usuario 1
```

```
git flow feature help
```

```
usage: git flow feature [list]
      or: git flow feature start
      or: git flow feature finish
      or: git flow feature publish
      or: git flow feature track
      or: git flow feature diff
      or: git flow feature rebase
      or: git flow feature checkout
      or: git flow feature pull
      or: git flow feature delete
```

Manage your feature branches.

For more specific help type the command followed by --help

Git flow (III)

```
# Usuario 1
```

```
git remote add origin /var/tmp/server/repo3.git
```

```
git push --set-upstream origin main
```

```
git flow feature start menu-movil
```

```
touch index.html
```

```
git add .
```

```
git commit -m "Añado el archivo index.html"
```

```
git flow feature publish
```

Git flow (IV)

```
# Usuario 2
```

```
cd /var/tmp/user2
```

```
git clone /var/tmp/server/repo3.git
```

```
cd repo3
```

```
git flow init
```

```
git flow feature track menu-movil
```

Git flow (V)

```
# Usuario 1
```

```
cd /var/tmp/user1/repo3
```

```
touch style.css
```

```
git add .
```

```
git commit -m "Añado el archivo style.css"
```

```
git push
```

```
# Usuario 2
```

```
cd /var/tmp/user2/repo3
```

```
git pull
```

Git flow (VI)

```
# Usuario 1
```

```
cd /var/tmp/user1/repo3
```

```
git flow feature finish menu-movil
```

```
git push -u origin develop
```

Git flow (VII)

```
# Usuario 2
```

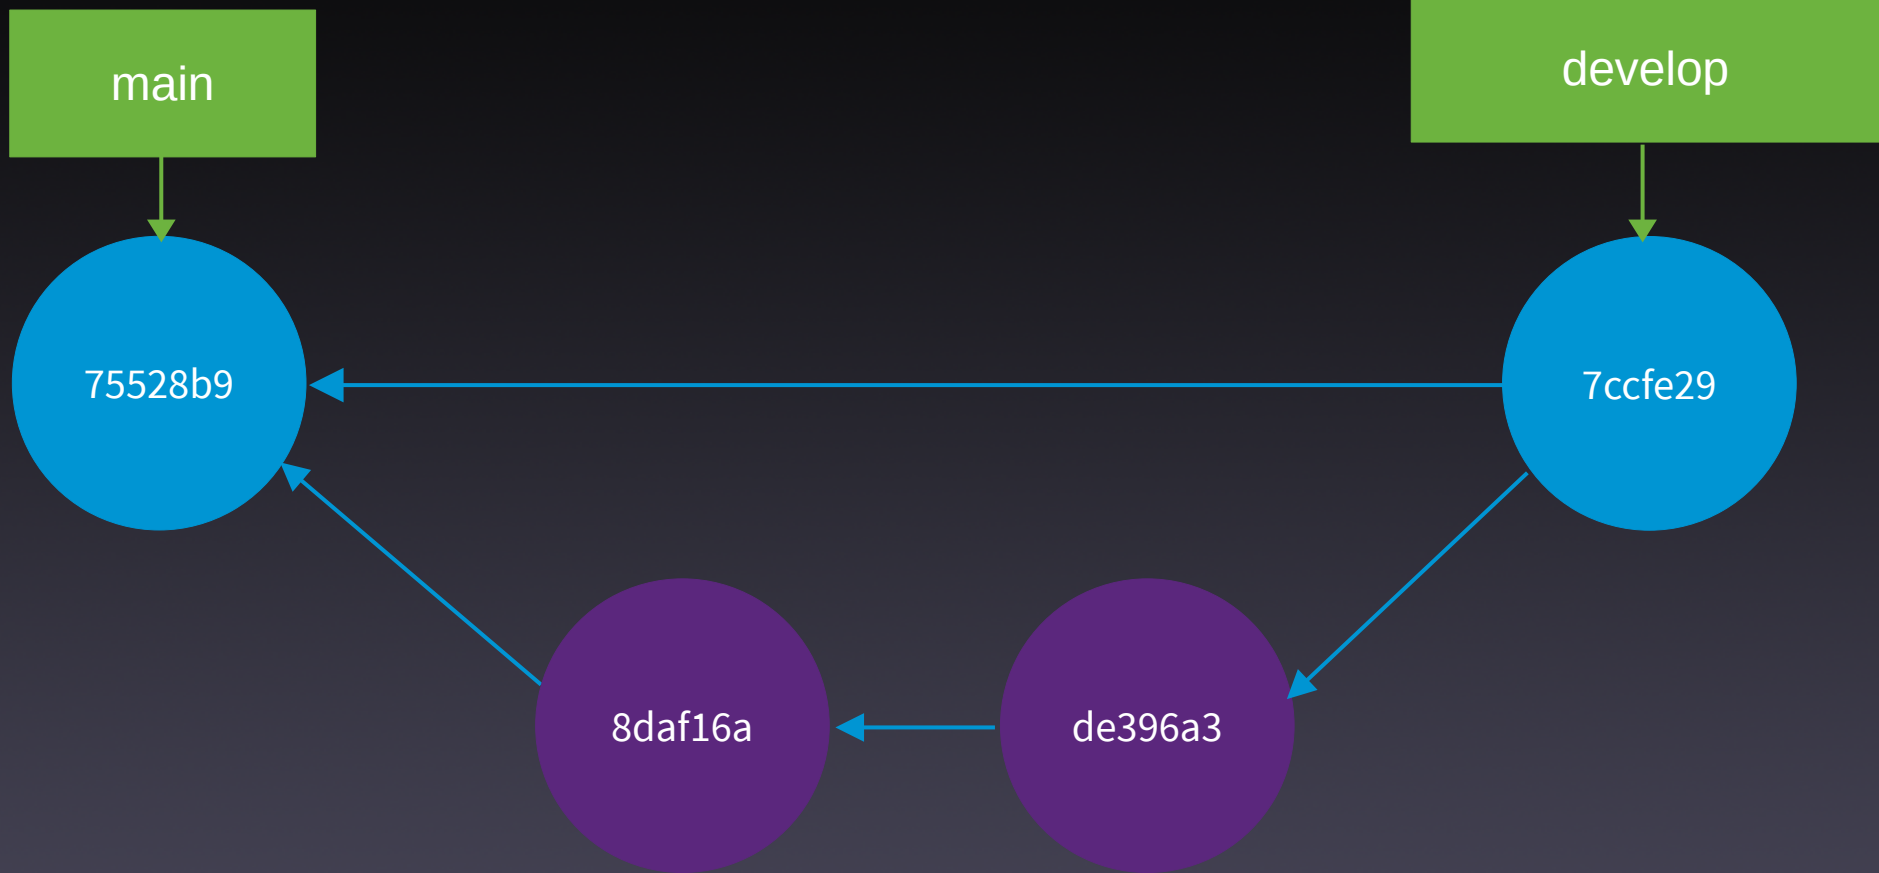

```
cd /var/tmp/user2/repo3
```

```
git switch develop
```

```
git flow feature delete menu-movil -f
```

```
git remote prune origin
```

```
git pull --set-upstream origin develop
```

Ventajas

- Estructura de ramas clara
- Separación de trabajos
- Gestión de las publicaciones estructurada

Inconvenientes

- Complejo
- «Sobrecarga» de trabajo vs. otros modelos
- Ciclos de publicación grandes → no válida para CD
- Falta de flexibilidad

Fork

Características

- Típico en proyectos de software libre
- Usa un modelo de ramas
- No integrado en git → soluciones externas (GitHub, GitLab, BitBucket,...)
- Repositorios en servidor:
 - 1 principal
 - 1 de cada desarrollador

Características

- Desarrollador hacen push en su repo
- Mantenedores lo hacen en el principal

Operativa

- Fork → clonado en el servidor
- Clonado local del fork
- Commit local y push al fork
- Creación de una PR → Discusión
- Más commits si es necesario
- Fusión de la PR en el proyecto principal

Comment

Remember, contributions to this repository should follow its [contributing guidelines](#).

ProTip! Add `.patch` or `.diff` to the end of URLs for Git's plaintext views.

Ventajas

- Facilita:
 - colaboración
 - Code review
 - CI/CD
- Buena seguridad: \neq repos

Inconvenientes

- Fragmentación del código
- Problemas de coordinación y comunicación
- Introducción de problemas de seguridad

Otros flujos de trabajo

Otros flujos

- GitHub flow
- GitLab flow
- Release Flow
- OneFlow
- Trunk-based development

Conclusiones

- No hay una solución válida para todos
- Empieza por la más sencilla
- Reduce el tipo de ramas
- Experimenta y háblalo con tu equipo
